Email: amdpvz@gmail.com
Mobile: +91 97065 19278
Address: Bengaluru, Karnataka

Skills

Frontend: Vue.js 3 (Composition API), React, Next.js (App Router), Pinia, TradingView

Languages: JavaScript (ES6+), TypeScript

Backend: Node.js, Express, Prisma ORM, cron jobs

Integration: REST APIs, OAuth, Webhooks, WordPress, LeadSquared

Databases: MySQL, MongoDB

UI & Styling: HTML5, CSS3, Tailwind CSS, SASS/SCSS, Material UI, Vuetify, Bootstrap

Cloud & DevOps: AWS EC2/S3, NGINX, PM2, Docker, GitHub Actions

Testing & Tools: Vitest, Git, GitHub, Postman, Figma

Practices: Technical SEO, Core Web Vitals, a11y, Code review, Mentoring

Education

Master of Computer Application (MCA)
Tezpur University (Central), Assam
2018 – 2021 | CGPA 8.04

Bachelor of Computer Application (BCA)
Gauhati University, Assam
2015 – 2018 | CGPA 7.3

Diploma in Civil Engineering
Assam Engineering Institute, Assam
2010 – 2014 | 66.46%

Profile

Senior Software Engineer with nearly 5 years building web applications across fintech and enterprise platforms. Lead development of Alice Blue's Next.js corporate website and TradeSchool, owning architecture, code review and releases. Strong in Vue 3, React and Next.js with Node.js backends, and focused on measurable gains in performance, SEO and reliability.

Experience

Alice Blue Financial Services | Senior Software Engineer | Feb 2025 – Present

- Built Rise, Alice Blue's Vue 3 mutual-fund platform, from scratch as its largest code contributor (~43% of the code): IPO, goal-investing and ELSS flows, payments on BSE StarMF 2.0, and a shared API service layer.
- Lead development of the Corporate Website and TradeSchool in Next.js: own the architecture, code review (~400 PRs merged) and production releases, and mentor junior developers.
- Redesigning TradeSchool hands-on (11 pages in Next.js 16 and Tailwind 4) and designed its next-phase architecture for content, login and payments.
- Built SEO-first stock and IPO sections (7,000+ pages with TradingView charts) and cut Google-reported 404s by 92% (34.5k to 2.7k) with nginx redirect maps and sitemap fixes.
- Improved INP: removed Material UI, deferred third-party tags (main-thread busy 343 to 18 ms/s), built real-user INP attribution, and cut a brokerage-calculator tap from ~4 s to under 0.2 s.
- Designed and shipped the internal Performance Management System solo (Next.js, Prisma/MySQL, AWS EC2), automating monthly reviews, weighted scoring and email notifications for 83 employees.
- Shipped an embeddable Vue 3 support-chat library for the vendor-maintained ANT trading app (9 languages, 170 test assertions), a Node.js LeadSquared CRM sync job, and Outlook-safe email templates on AWS S3.

Software AG | Software Engineer | Feb 2022 – Apr 2024

- Built most of the card-based bots in a 50+ Webex bot catalogue on webMethods, with up to 20 actions each and Adaptive Cards.
- Refactored legacy webMethods code to ES6+, cutting workflow execution time by 40%, webhook startup by 75% and API transaction costs by 15%.
- Built per-bot usage and error reports for Cisco from MongoDB logs in Node.js.
- Helped migrate AppHub from class-based to functional React components.

CrowInfo | Web Developer (Internship) | Feb 2021 – Feb 2022

- Built client web apps in e-commerce, automotive, education and logistics using HTML, CSS, JavaScript and Vue.js.

Open Source/Personal projects

pnl-heatmap (npm package): Zero-dependency JavaScript library that renders GitHub-style daily P&L calendars, with ESM/UMD builds and CDN delivery.

Dual-Hangman Game: Real-time two-player game in TypeScript (React, Node.js, Socket.IO), hosted on AWS EC2 with NGINX and PM2; built with AI-assisted development (Claude Code, Antigravity IDE).
