Email: amdpvz@gmail.com
Mobile: +91 97065 19278
Address: Bengaluru, Karnataka

Skills

Frontend: Vue.js 3 (Composition API), React, Next.js, Pinia, TradingView Charting Library

Languages: JavaScript (ES6+), TypeScript

Backend: Node.js, Express, API proxy layers

Integration: REST APIs, Axios / Fetch, OAuth, Webhooks

Databases: MySQL, MongoDB

UI & Styling: HTML5, CSS3, Tailwind CSS, SASS/SCSS, Material UI, Vuetify, Bootstrap

Cloud & DevOps: AWS EC2, Docker, NGINX, Linux, PM2, SSH

Testing & Tools: Vitest, Git, GitHub, Postman, Figma

Practices: Responsive design, Accessibility (a11y), Clean architecture, Agile

Education

Master of Computer Application (MCA)
Tezpur University (Central), Assam
2018 – 2021 | CGPA 8.04

Bachelor of Computer Application (BCA)
Gauhati University, Assam
2015 – 2018 | CGPA 7.3

Diploma in Civil Engineering
Assam Engineering Institute, Assam
2010 – 2014 | 66.86%

Profile

Senior Software Engineer with nearly 5 years modernizing web applications across fintech and enterprise platforms. Experienced in rebuilding production systems end to end, pairing Vue 3, React, and Next.js interfaces with Node.js API layers, and shipping them through evolving APIs, backend migrations, and third-party integrations. Focused on clean architecture, measurable performance gains, and reliable releases.

Experience

Alice Blue Financial Services | Senior Software Engineer | Feb 2025 – Present

- Re-architected and rebuilt Rise, Alice Blue's investment platform, in Vue 3 (Composition API), owning investment and payment workflows end to end and integrating BSE 2.0 APIs.
- Building the Corporate Website and TradeSchool in Next.js, with SEO-optimized routing, faster page loads, and an accessibility-first component architecture.
- Kept production releases seamless through continuously evolving APIs and a full backend migration from Java to Go.
- Maintain Node.js API layers that proxy external requests, enforce controlled access, and handle third-party integrations.
- Refactored the Partner Dashboard and eKYC platforms onto shared, reusable patterns, cutting duplicated logic and speeding up feature work.
- Own release coordination, deployment setup, cron scheduling, and cloud storage integration; cover critical flows with Vitest unit tests and ship responsive transactional email templates.

Software AG (acquired by IBM) | Software Engineer | Feb 2022 – Apr 2024

- Refactored the legacy webMethods codebase to ES6+ and removed heavy dependencies such as Lodash, cutting workflow execution time by 40%, webhook startup by 75%, and API transaction costs by 15%.
- Developed Node.js plugins and automation scripts for real-time data processing and service integration on the webMethods platform.
- Built and maintained multi-platform integration bots for Webex Teams, driving interactive workflows with Microsoft Adaptive Cards.
- Migrated AppHub from class-based to functional React components, improving OAuth integration and service configuration.
- Integrated third-party SaaS platforms over REST APIs and webhooks to power bot-driven workflows.

CrowInfo | Web Developer (Internship) | Feb 2021 – Feb 2022

- Built and maintained client web applications across e-commerce, automotive, education, logistics, and services using HTML, CSS, JavaScript, jQuery, and Vue.js.

Open Source/Personal projects

pnl-heatmap (npm package): Reusable GitHub-style heatmap component for visualizing time-series financial performance data, published to npm and drop-in across frontend applications.

Dual-Hangman Game: Full-stack Node.js and React app deployed on AWS EC2 with NGINX, PM2, and Linux administration; built with AI-assisted development (Claude Code, Antigravity IDE).
